Single and Double Bracelets and Necklace

The single necklace and bracelets are made using a single strand of tigertail and threading silver tubes with varying amounts of beads in the middle.

The double strand bracelet is made using two strands of tigertail attached together with a crimp at the clasp then threaded separately with silver tubes and beads. The two wires are brought together at the end to attach the other side of the clasp.

Crystal Wave Necklace

Attach two strands of tigertail to the clasp then thread silver tubes and beads along the side of the necklace from the centre back to the collarbone or your desired length.

Separate the two strands then *thread six 3x4mm crystals on one wire then one 3x4mm crystal, one 8x10mm and one 3x4mm crystal on the other wire. Bring both wires together through another 3x4mm crystal.*

Repeat from * to * along the front of the necklace then bring the wires together and complete the necklace to match the first side.

Crystal Drop Cluster Necklaces and Bracelet.

The necklace and bracelet set are made by attaching two strands of tigertail to the clasp then thread silver tubes and beads along the side of the necklace or bracelet from the centre back to your desired length.

Separate the wires then thread one crystal drop, one 3x4mm crystal and one crystal drop on each wire. Bring the wires together through one 8x10mm. Repeat this pattern for your desired length then bring the wires together and complete the necklace or bracelet to match the first side.

This necklace is made using three wires in the same way. The central cluster is made by bring all three wires through one 8x10mm bead then separate all three wires and place one crystal drop, one 3x4mm crystal and one crystal drop on each wire. Bring all of the wires through one 8x10mm crystal then complete the necklace to match the first side.

Set Four: Crystal Drop Pendant Necklace

Using two strands of tigertail, thread one seed bead on both wires and bring to the middle of the wires. Bring all four ends together and thread on one 10x8mm crystal over all four and slide it down to the seed bead. Separate the wires and thread one crystal drop, one 3x4mm crystal and one crystal drop on each of the four wires. Bring the wires together through one 10x8mm crystal then a crimp bead. Make sure the crystal beads and drops are all snug then secure them by squashing the crimp. Cover the crimp using a crimp cover then take all wires through a seed bead. Separate the wires into two each side then thread one seed bead over both wires on each side.

Continue threading beads and tubes over both wires each side of the necklace.

We hope these ideas get you inspired to make some lovely bracelets, necklaces and earrings using our designs and some of your own. Please send us some photos of designs you make using the kit to info@beadspider.co.uk and we will add them to our new forum pages!
