Colour A

4mm Crystal Bicone

Colour B

4mm Crystal Bicone

Preciosa 10/0 Seed Bead

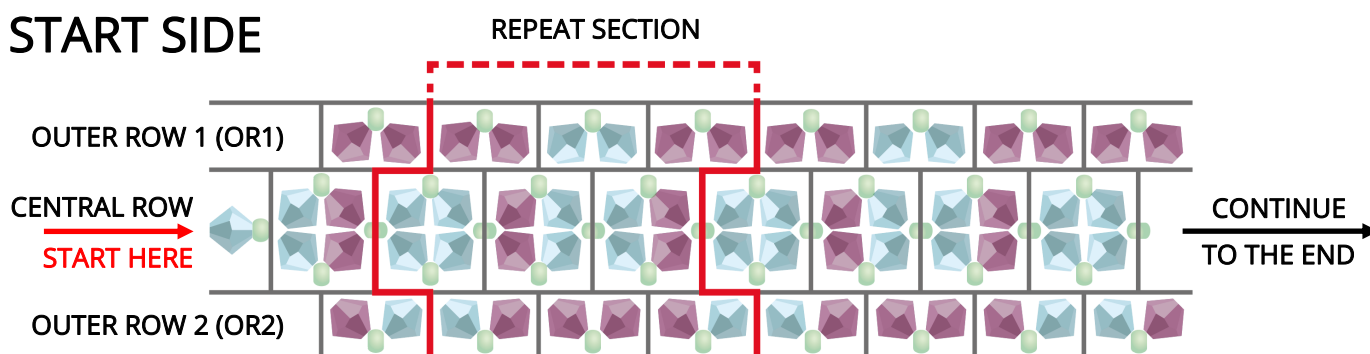

How To Read These Patterns

The patterns in this pattern pack are split into three separate sections that are worked one after the other. Work begins with the central row and is followed by each of the two outer edges.

After adding the clasp, the central row is worked in two needle Right Angle Weave. The section marked in red is one full repeat of the pattern and can be repeated as many times as necessary. Make the entirety of your desired length followed by the second side of your clasp to match the first.

To add the outer rows, if you are confident with the pattern, you can work back from the end towards the start side, otherwise, bring in a new thread and work from the start side, towards the end again.

Using the diagram above, begin at the red arrow by adding your clasp and the first crystal.

NOTE: This section only refers to the crystals used since all seed beads added are the same colour.

Working the central row in two needle Right Angle Weave (RAW), the upper two crystals of the first box are threaded onto one needle (1x **Colour A** & 1x **Colour B**) and the lower two onto the other (1x **Colour A** & 1x **Colour B**).

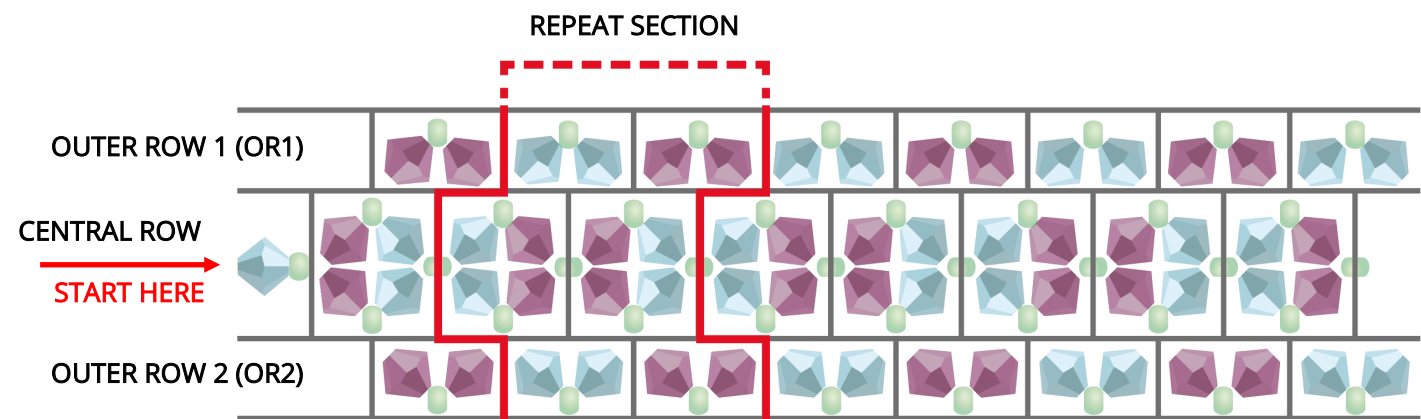

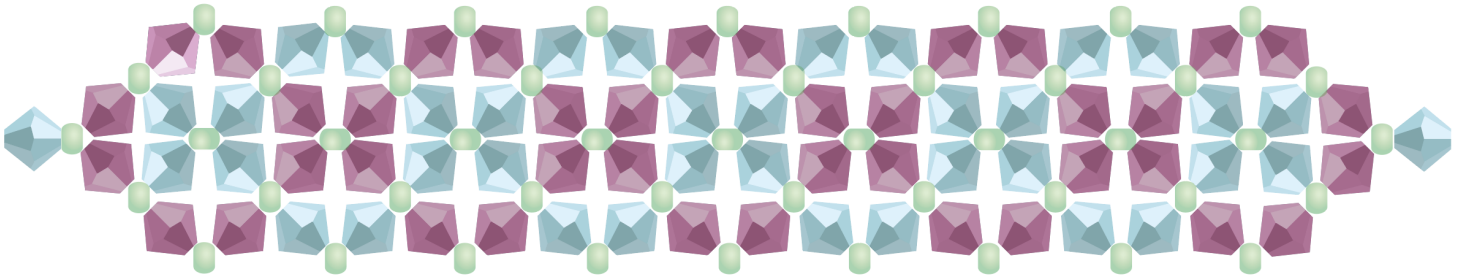

Moving on to the second box of the central row (the first inside the repeat section), the upper thread has 2x **Colour A** and the lower thread has 2x **Colour A**. In the next box along, the upper thread has 1x **Colour B** & 1x **Colour A** and the lower thread has 1x **Colour B** and **Colour A**. After adding the final central row box of the repeat section, you can repeat this section as many times as required to reach your desired bracelet length.

Once you are in position to begin outer row 1 box 1 (OR1 B1), working from the start side, OR1 B1 has 2x **Colour B**, OR1 B2 has 2x **Colour B**, OR1 B3 has 2x **Colour A**, OR1 B4 has 2x **Colour B**. Continue with the repeat section as necessary.

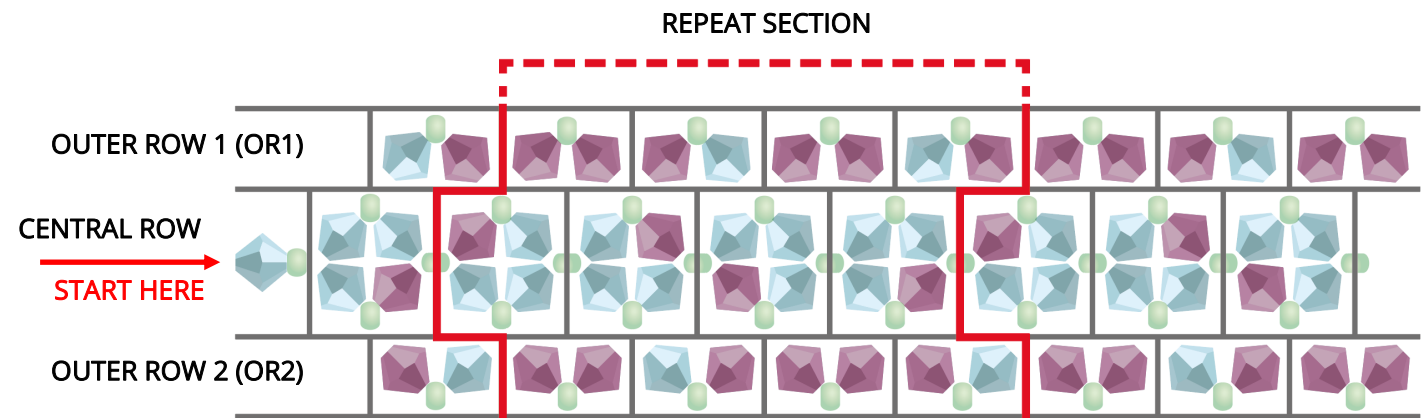

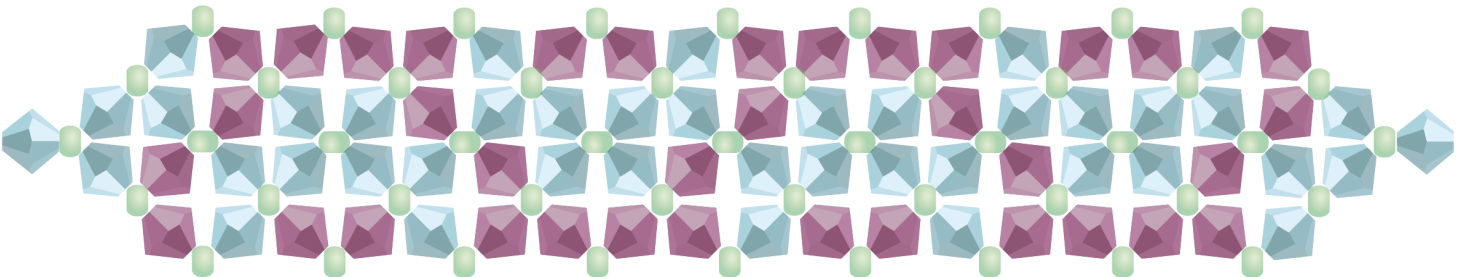

Add Outer Row 2 (OR2) in the same way. OR2 B1 has 1x **Colour B** & 1x **Colour A**, OR2 B2 has 1x **Colour A** & 1x **Colour B**, OR2 B3 has 2x **Colour B** etc)
